TRAILER CONNECTORS

Standard... Parts For The Road...To Keep You Driving!

The Number One Choice! Standard Vehicle To Trailer Wiring System...

Wiring from vehicle to trailer was a big job, it could take hours of cutting, splicing, soldering and stripping. Not to mention getting to the original equipment wire you need to attach to. Now, the “professional installer” or a “do-it-yourself” individual can do a complete vehicle to trailer installation the easy plug in way. This modular wiring adapter is ready made to plug right into the original equipment system.

The adapters plug into a molded connector joining the car and truck body or bed wiring harness to the chassis harness to provide tail, brake and turn signal light wiring to the trailer connector.

HOOK ME UP!

On some applications you have a choice of a complete one-piece molded unit or two separate connectors. The **1-piece connector** consists of a built-in 4-pole flat extension. The advantage of the **2-piece connector** is the 4-pole extender may be replaced if damaged and the end may be interchangeable for a 6-way or 7-way connector.

If a vehicle connector is not available, use a universal converter. There are three types of converters: 4-wire flat, general purpose and power converter/isolator.

A **4-wire flat** is the most common trailer plug. A **4-wire flat** converter is used with a common bulb standard tail light system. Brake light and turn signal functions work through the same bulbs. The lens at the back of the vehicle will be completely red.

A **converter** changes the tow vehicle's independent turn signals to the standard wiring found on trailers. Brake/tail lights and turn signal functions work through separate, independent light bulbs. A general purpose converter is designed for small trailers with 2 stop/tail lights and 4 running lights.

If the trailer has a large amount of bulbs, or to prevent damage to the converter or tow vehicle, a **power converter** or an **isolator** is recommended for guaranteed protection. A **power converter** is used to adapt the independent turn signal system found on tow vehicles to the trailer standard or common bulb system. The **power isolator** isolates the trailer lighting functions from all electronics on the vehicle including light circuits, on-board computers, anti-lock brake systems, information centers and lamp outage modules.

TRAILER CONNECTORS

TRAILER CONNECTOR CONVERTERS

Converters

Universal Converters are designed for vehicles that are not equipped with factory tail light plugs. Power Tail light converters completely isolate the tow vehicle from any trailer malfunctions. Power is taken directly from the battery for isolation and brighter tail lights. Each unit can power up to two sets of stop/turn signals on the trailer.

MARINE WIRE & CABLE

PRIMARY WIRE & ACCESSORIES

STANDARD The Number One Choice! For Automotive & Marine...

OE manufacturers have been using TWP (thin wall PVC) wire since the early 1990s in order to save weight without sacrificing functionality. Wire gauge is determined by the total cross sectional area of the copper conductor strands (see listings below). Don't be misled by the thickness of the jacket when selecting wire size.

- Our TWP primary wire is manufactured with the highest stranded copper wire with tough durable vinyl insulation.
- The insulation resists abrasion, grease, oil and battery acid; and won't support combustion.
- Our wire is available in a broad range of sizes, types, and colors for any electrical repair, replacement or customizing job.

NOTE: Fusible link wire is made to be an exact replacement for the fusible links used by OE on battery cable and other circuits for protection from current overloads. Always replace fusible link with same size and gauge used on original circuit. In general, fusible link is four gauges smaller than the circuit wire. (EXAMPLE: Circuit wire = 10 ga.; fusible link = 14 ga.)

PRIMARY WIRE

HEAVY DUTY CROSS LINKED POLYETHYLENE PRIMARY WIRE

SAE J-1128 TYPE SXL 125° C/257° F

Cross-linked polyethylene insulation provides outstanding resistance to heat. It withstands severe conditions which can degrade regular plastic primary wire such as oil, gasoline, and abrasion as well as heat. An overloaded wire will not melt and fuse with other wires in a harness. The damaged wire can be slid from the harness and replaced individually. Recommended for all heavy duty applications including trucks, buses, and fleets.

MULTIPLE BATTERY ISOLATORS

- Electronically isolates auxiliary battery from main start battery.
- One way directional design prevents auxiliary battery from robbing main/start battery.
- No matter how drained an accessory battery becomes, the main battery will always have the power to start the engine.
- Suitable for all multi-battery systems, including RV and inboard marine.
- Multi-battery isolators are designed for alternator systems with negative ground, and batteries of the same nominal voltage. Batteries of differing voltages cannot be used.
- For optimum systems performance batteries labeled “Deep Cycle” should be used in the auxiliary position.

BP42 - 95 AMP Multi-Battery Isolator – For one main battery, one auxiliary battery, alternator up to 95 amp output, including GM “CS” series alternator.

BP43 - 120 AMP Multi-Battery Isolator – For one main battery, one auxiliary battery, alternator up to 120 amp output, including GM “CS” series alternator.

BP44 - Battery Isolator Installation Kit – Kit includes: 15 feet of 8 gauge primary wire; 50 Amp circuit breaker; Terminal and connector hardware pack; 8 ga., ring terminals, (2 1/4" stud, 4 5/16" stud, 1 3/8" stud), 1 - 12-10 ga splice, 2 each 1/4" nuts and washers, 2 circuit breaker mounting screws.

BP45 - Connector Assembly Kit – For GM & Jeep vehicles with Delcotron “CS” series alternators. Group 2 applications - 1985 and newer. Kit includes: Various 16-14 ga terminals, sense wire for “S” position on certain GM “CS” alternator connectors, primary wire.

*BP45 connector kit is required for Group 2 applications with Delcotron “CS” alternators. Included is a sense wire required for the CS130D alternator. **CS series alternator is identified by the number of holes in the plug-in connector. The CS series has 3 smaller square holes and 1 larger square hole. CS130D alternator has 4 square holes all the same size. Standard series has 2 slotted holes.

(1) — 8 ga. wire, 50 Amp circuit breaker or BP44 connector kit (includes: 15 ft. 8 ga. wire, 50 Amp CB, terminals and connectors).

Refer to detailed assembly instructions included with each Multi-Battery Isolator.

Customize Your Own Battery Cables... And Welding Cables...

Bulk battery and welding cable can help you repair or adapt to a wide range of cable make-ups. Our bulk cable comes in a wide range of gauges and coil lengths. Also available is a complete selection of individual terminals, adapters and other accessories to accommodate any situation: from an emergency hookup to a custom application.

Our **heavy duty cable** exceeds SAE Spec J1127 for Type SGR cable, and exhibits higher levels of heat resistance and resistance to corrosive elements (oil and moisture). That's why our cable works better and lasts longer.

Insulation Temperature Rating 110° C (230° F)

DON'T try this on conventional battery cable! This is what a hot soldering iron does to conventional battery cable jacket after 30 seconds . . .

Our heavy duty battery cable takes the heat. No trace of melting or burning after contact with same hot soldering iron. In some applications, battery cables can make contact with hot engine parts which often reach temperatures as high as a hot soldering iron.

Insulation Temperature Rating 105° C (201° F)

ORDERING INFORMATION

Suffixes in charts indicate length of coil. (**V** = 25 ft. coil, **L** = 50 ft. coil; **C** = 100 ft. coil.) Cable is sold by the foot, not by the coil. To order, specify total number of feet required, followed by part number and desired coil size (suffix).

Examples: To order four-25 ft. coils of 1 gauge battery cable, order 100' **CS1V**. To order one-50 ft. coil of 2 gauge battery cable, order 50' **CS2L**. To order three-25 ft. coils of 2 gauge welding cable, order 75' **WC2V**.

Instructions For Cable Assembly

- 1 Strip the insulation from the cable allowing the exposed copper to reach the bottom of the terminal.
- 2 Place the proper size slug into the terminal. Secure the terminal in vise. Slide heat shrink tubing over the cable. Apply several drops of flux (BP192) to the exposed cable. Insert the cable into the terminal.
- 3 Heat the base of the battery terminal with the ignited torch gently pressing downward on the cable. Allow the cable to slide into the terminal until the insulation is snug against the top of the terminal. Remove the heat.
- 4 Slide the heat shrink tubing over the connection; apply heat to the tubing using a heat gun (WTT20). For additional heat shrink instructions see pages B30-B31.

HOW TO USE HEAT SHRINK TUBING

CAUTION: Disconnect battery cables before applying heat shrink tubing!

- 1 Select tubing to assure a tight fit after shrinkage. Consider the outside dimension of the terminal when determining tubing diameter. Shrink ratios: 3:1 for double wall tubing; 2:1 for single wall.
- 2 Cover at least 1/2" of the terminal barrel and 1" of the cable.
- 3 Apply heat evenly to all areas of the tubing. When tubing starts to shrink, focus heat at center of tubing and move heat toward ends to eliminate any trapped air.
